

**NJ 50x30 Building Electrification Team Presents:
Reduce Our "Personal" Pollutions in Our Own Homes**

Start in your own home to reduce your climate-changing footprint.

[RSVP HERE](#), to join NJ 50x30 Building Electrification Team's **June 16 webinar at 7 pm** when we discuss the obvious -- better insulation, sealing window and door drafts and leaky air ducts -- and, of course, installing solar panels. But we also have a new twist -- replacing both your furnace and air conditioners with new technology -- a high efficiency cold-climate heat pump.

The Sierra Club Building Electrification Coordinator, Steve Miller will host 4 homeowners who explain getting off the pollution treadmill while cutting energy usage.

A healthy Earth begins by registering [HERE](#). You will receive the Zoom link to join us on Thurs, June 16, at 7PM.

"See" you there!!
